

**Northeastern Illinois University**  
**CS 300: Client Side Web Development**  
**Professor Yehuda Gutstein**  
**Final Individual Project**

**Due Date: Week 15 Day of Class by 7 p.m.**

**Objectives**

- Review of the HTML, CSS and JavaScript skills learned until this point.

**Basic Requirements**

- Properly use and indent all tags.
- Set up page with <html>, <head> and <body> tags.
- The page should contain your name in the <footer>.

**Project Description**

Using the skills you have gained in this course, create a homepage for yourself. This homepage will be a space for you to talk about yourself, your education, work experience and goals. Additionally, it will be a place for you to showcase your work – a portfolio to show prospective employers. The final product should be a homepage that you will feel proud to show friends, families and prospective employers and clients.

Your homepage should include the following:

- A single webpage.
- Navigation that allows the user to jump from section to section
- A footer
- Your name
- An image of yourself
- A description of yourself
- Your goals
- Your work experience
- A link to a pdf version of your resume
- Contact information
- Work samples
  - Links to all the assignments and projects completed this semester. These may be plain links or preferably, images (screenshots) that link to the actual assignment.

Before you begin working on this project, find a template or other site that you would like to emulate. Use this site as the basis for the design of your personal homepage.

Some places to look:

- [www.templatemonster.com](http://www.templatemonster.com)
- [www.themeforest.net](http://www.themeforest.net)
- search for online portfolios, single page websites, etc.

**Final Individual Project**

**Uploading your project**

1. Upload the finished project to your personal webpage:  
**homepages.neiu.edu/~username/index.html**
2. Submit the url of your project via desire2learn in the dropbox in order to receive credit.

**NOTE: Since this project will be the index page for your webspace (index.html), you will not need to include index.html in the url – just [homepages.neiu.edu/~username](http://homepages.neiu.edu/~username). In order for the browser to default to the index.html page on your site, you must make sure to delete the default landing page that was given to you by the Help Desk. Otherwise, when you navigate to your site, that page will appear.**

**Grading**

- Total possible points: 100
  - A
    - URL is valid.
    - All content is present.
    - No broken images.
    - Proper use of floating, positioning, colors, transparency, etc.
  - B
    - URL is valid.
    - All content is present.
    - 0 -1 broken images.
    - Mostly proper use of floating, positioning, colors, transparency, etc.
  - C
    - URL is valid.
    - Missing some content.
    - Multiple broken images.
    - Improper use of floating and positioning.
  - D
    - URL is valid.
    - Lacking most of the content.
    - Multiple broken images.
    - Little to no styling.
  - F
    - URL does not work
    - URL works, but lacking most of the content.
    - Multiple broken images.
    - Little to no styling.
